Anastasia Kozluk

Software Engineer

Hi there! I'm an autodidact front-end developer based in Warsaw. Passionate about crafting seamless user experiences, I specialize in building dynamic and responsive web applications using the powerful combination of React and TypeScript. With a keen eye for design and a commitment to code quality, I bring innovation to life in the digital realm.

Employment History

Frontend Developer at DatHuis, Amsterdam

APRIL 2021 – PRESENT

DatHuis develops a **marketing automation platform** for the real estate market. As part of a **multidisciplinary team**, I contributed across all facets of the frontend, including lead generation apps, the website widget, and the core platform. We followed **continuous integration** and **continuous delivery** (CI/CD) practices, ensuring high test coverage according to our **testing pyramid**—unit testing with Jest, end-to-end (E2E) testing with Cypress, and smoke testing via Storybook. During my time, I played a key role in migrating our entire E2E testing suite to Playwright.

Key Contributions:

- **Onboarding Wizard Development:** Researched, designed, planned, and implemented an onboarding wizard to streamline new user setup. Led task distribution across the team to ensure smooth execution and timely delivery.
- **Large-Scale UI/UX Improvements:** Overhauled the design system by modernizing key UI components, improving platform-wide consistency and user experience. Fixed widespread layout inconsistencies, ensuring proper spacing, alignment, and responsiveness across all application screens.
- **Frontend Codebase Modernization:** Refactored and converted over half of the project's class-based React components to functional components, improving performance, readability, and maintainability. Migrated legacy dependencies and transitioned core features to modern frameworks and best practices.
- **Privacy & Compliance Enhancements:** Led research and implementation of a custom cookie banner, ensuring alignment with GDPR, Google Consent Mode, and broader privacy compliance standards.

Frontend Developer at Freelance

OCTOBER 2020 – APRIL 2021

- Creating responsive design and cross browser compatible websites using HTML/CSS/Javascript.
- Collaborating with designers and developers using Git, Trello, Figma.
